01

Introduction

Nexa is a **French non-profit organization** (Law 1901) designed to unite multiple charitable associations under a single ecosystem. Its mission is to make crypto donations **transparent, secure, and efficient** using blockchain technology.

By leveraging Solana's high-speed, low-fee network, Nexa aims to modernize philanthropy and expand crypto adoption in the charitable sector. Every contribution should be **traceable, verifiable, and attributed** — without relying on an opaque intermediary.

MISSION

Visible gifts

On-chain traceability from donor to association.

NETWORK

Solana

Low fees, fast finality — fit for micro-donations.

STATUS

Law 1901

RNA W131019858 · public JOAFE and SIREN.

Project overview

Nexa provides a decentralized platform where associations receive cryptocurrency donations **without intermediaries**. The **FLY** token is the utility token of the ecosystem: donors can track contributions in real time and take part in governance. This approach builds trust, transparency, and community involvement in charitable giving.

nexafly.org is the public front of that infrastructure: an association directory, USDC → FLY swap (Jupiter, Titan), the internal dollar nUSD, and a treasury wallet anyone can inspect.

Path of a donation

1

Enter the rail

The donor swaps USDC (or SOL) into FLY, or operates in nUSD. The swap runs on Solana DEXs — Jupiter or Titan — not inside a private black box.

2

Send to a public wallet

Funds go to Nexa FLY's transparency wallet, or to an association's own wallet once it has been claimed. The address is published. The transaction is visible on Solscan.

3

Tag, then redistribute

Hosted associations first share the Nexa treasury. Each gift is tagged in the ledger (destination association). Redistribution to beneficiaries remains on-chain.

PRINCIPLE

Trust is not declared. It is checked — on an explorer, against a public address, without an unreadable PDF report six months later.

Token utility

FLY is not a security. It is the association's utility token: a rail for donations, governance, liquidity, and incentives.

DONATIONS

Direct contribution

FLY can be used for direct gifts to registered associations. The transfer is a public, timestamped Solana transaction.

GOVERNANCE

Holder votes

Token holders vote on ecosystem proposals and partnership decisions. Votes are visible on-chain.

LIQUIDITY

Tradable on DEXs

FLY trades on Solana DEXs (Raydium, Orca) and can be bought via Jupiter or Titan from USDC or SOL.

INCENTIVES

Participation

Community members and partner associations may receive FLY for active participation.

nUSD, the dollar on the FLY rail

Nexa USD (nUSD) is the internal stable token, **pegged 1:1 to USDC**. It is used for gifts, pools, and association treasury without exposing the donor to FLY price risk. USDC remains the external rail — the site's public book reads the FLY / USDC pair, the deepest market.

ROLE

Stable gifts

Enter in USDC, operate in nUSD, no FLY price exposure.

TARGET PEG

1 ≈ 1 USDC

Internal unit of account, controlled by the association.

CONTRACT

711P4h...GqcDx

SPL · Solana

Three units, three roles

EXTERNAL

USDC

The market dollar. The public book reads FLY / USDC — the volume that matters.

INTERNAL

nUSD

The association dollar, backed 1:1. Gifts and pools without FLY price exposure.

UTILITY

FLY

The association token. Governance, traceability, and liquidity on Solana.

Tokenomics

FIELD	VALUE
Name	Nexa
Symbol	FLY

nUSD mint	711P4haqL2hzDA1KrfWST5QFdigDRymQoLxDGfMGqcDx
Reference pair	FLY / USDC — site public book
Pools	Raydium (4) · Orca (1)
Venues	Jupiter, Titan, Raydium, Orca, Meteora

Technology & blockchain

Chain

Solana. Negligible fees, fast confirmation — a requirement for gifts of every size, including very small ones.

Standard

SPL Token. Compatible with Phantom, Solflare, Backpack, Ledger, and any Solana wallet (Wallet Standard).

Audits

Internal reviews completed. External audits planned. No third-party audit is claimed until the report is published.

Analytics

Every transaction is trackable on-chain: Solscan, DexScreener, GeckoTerminal. Nothing sits off-book.

Ecosystem & partnerships

Nexa collaborates with verified non-profit organizations so donations reach legitimate beneficiaries. Multiple Solana DEXs carry liquidity. Phantom and Solflare make FLY accessible worldwide.

Hosted associations

Major French and international associations are pre-listed in the directory (Red Cross, MSF, UNICEF, WWF, Restos du Cœur, and others). **Until an association claims its own wallet, gifts intended for it transit through the Nexa FLY treasury** — the public wallet below — and are tagged in the ledger. That balance is not “theirs”: it is a deposit awaiting redistribution, under Nexa’s control.

NEXA FLY TREASURY WALLET

bosnEo1BZdm3M9mHu9NdeWkuBwDuvtF7wJ3Eo7gmhwT

Solscan: solscan.io/account/bosnEo1BZdm3M9mHu9NdeWkuBwDuvtF7wJ3Eo7gmhwT

DEXs & swap

- Jupiter — Solana route aggregator
- Titan Exchange — alternate USDC → FLY route
- Raydium, Orca, Meteora — native liquidity

Wallets

- Phantom, Solflare, Backpack
- Ledger and Solana mobile wallets
- Any Wallet Standard compatible app

A partner association can later connect its own wallet: subsequent gifts arrive directly. Until then, Nexa holds, tags, and redistributes.

Roadmap

Q2 2025 – Foundations

Concept and token

Project design, FLY token creation, Law 1901 association frame.

Q3 2025 – Liquidity

First pools

Launch of Raydium and Orca pools. The public book now reads FLY / USDC.

Q4 2025 – Access

Listings and wallets

Listings (CoinGecko), Phantom and Solflare integration, DexScreener / GeckoTerminal presence.

2026 – Platform

Full product

Full platform, association directory, NFT donation certificates, European expansion.

Community & governance

The community sits at the centre of the project. FLY holders can vote, propose new partnerships, and help shape the ecosystem's growth. **All contributions and all governance actions are public on-chain** — that is the condition of trust.

Vote

Ecosystem proposals, partnerships, redistribution priorities.

Propose

An association, a tool, a pool: the community can put it on the agenda.

Verify

No closed minutes. The explorer is enough.

Legal identity & transparency

Nexa FLY is a registered association. Filing documents (receipt, SIREN, JOAFE notice) are published on nexaflly.org, in the *legal* folder.

Notice. This document describes the Nexa FLY association, the FLY utility token, and the internal stable nUSD. It is not a public offering of securities, investment advice, or a return guarantee. FLY trades on decentralized markets: the price can move, including down. Crypto donations are irreversible. Pre-listed associations have not all claimed their own wallet; until they do, funds transit through the Nexa FLY treasury and are tagged in the ledger. Version 2.0 — August 2026. Replaces the previous white-background edition.
